Remote Patient Vitals Monitoring System

EPICS

Epic 1: Real-Time Vitals Monitoring

Epic 2: Critical Alert & Escalation Management

Epic 3: Clinical Threshold Configuration

Spaces / Remote Patient Vital... / RPVL1-3

Epic 3: Clinical Threshold Configuration

Description

Allow authorized caregivers to securely log in and configure per-patient clinical thresholds so alerts reflect each patient's specific condition. Maps to FR-005.

Story Points

The screenshot shows a Jira Backlog view with 7 work items. The items are listed in a table with columns for item ID, story name, epic, status, and assignee. The items are:

Item ID	Story Name	Epic	Status	Assignee
RPVL1-4	Story 1.1: Vital Telemetry Ingestion	Epic 1: Real-Time V...	To Do	
RPVL1-5	Story 1.2: Threshold Breach Detection	Epic 1: Real-Time V...	To Do	
RPVL1-6	Story 2.1: Multi-Channel Alert Dispatch	Epic 2: Critical Aler...	To Do	
RPVL1-7	Story 2.2: Alert Acknowledgment	Epic 2: Critical Aler...	To Do	
RPVL1-8	Story 2.3: Automatic Backup Escalation	Epic 2: Critical Aler...	To Do	
RPVL1-9	Story 3.1: Authenticated Threshold Configuration	Epic 3: Clinical Thr...	To Do	
RPVL1-10	Story 3.2: View Threshold History	Epic 3: Clinical Thr...	To Do	

At the bottom of the backlog, there is a '+ Create' button.

Sprint 1 Planning

The screenshot shows a Jira Sprint Planning view for 'RPVL1 Sprint 1'. The sprint has 4 work items. The items are listed in a table with columns for item ID, story name, epic, status, and assignee. The items are:

Item ID	Story Name	Epic	Status	Assignee
RPVL1-4	Story 1.1: Vital Telemetry Ingestion	Epic 1: Real-Time V...	To Do	
RPVL1-5	Story 1.2: Threshold Breach Detection	Epic 1: Real-Time V...	To Do	
RPVL1-6	Story 2.1: Multi-Channel Alert Dispatch	Epic 2: Critical Aler...	To Do	
RPVL1-7	Story 2.2: Alert Acknowledgment	Epic 2: Critical Aler...	To Do	

At the bottom of the sprint planning view, there is a '+ Create' button.

Sprint 2 – Completion

Burndown Chart

1. Did your estimations reflect the actual effort?

Yes, the estimations were reasonably close to the actual effort. The story points helped us estimate the relative complexity of each task and distribute the work across the two sprints. Most of the planned stories were completed within their respective sprints, suggesting that the estimates were practical.

2. Was your backlog well-prioritized?

Yes. The backlog was prioritized by handling the Real-Time Vitals Monitoring and Critical Alert & Escalation Management stories first, followed by Clinical Threshold Configuration. This allowed the more important monitoring and alert-related functionality to be addressed before configuration and history-related features.

3. How did your simulated sprint align with your plan?

The simulated sprints aligned well with the plan. Sprint 1 contained the first four stories and was progressed toward completion, while Sprint 2 contained the remaining stories. The document includes separate sections for Sprint 1 planning, progress, completion, and Sprint 2 planning and completion.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart showed how the team's remaining work changed throughout the sprint. It helped compare the planned work with the actual progress and showed whether the team was completing work at the expected rate. Since the planned stories were ultimately completed, the chart indicated that the team's capacity was sufficient to finish the planned sprint workload.
